This Axle Load Weighing System is capable of independently determining individual axle loads, as well as the total vehicle weight. The air bag pressure is determined using highly accurate sensors positioned on the left- and right-hand side of the vehicle that are wirelessly connected to the display unit. The screen displays the load on each axle – as well as the total vehicle weight – to an accuracy of almost 100%. This enables you to load your vehicles to the maximum permissible limits and to achieve the highest possible returns! Installation is extremely simple thanks to wireless technology and loading can be monitored from within a radius of 150 m. Wherever you want to install it!
Unique properties of the onboard Axle Load Weighing System:

- all information available at a single glance
- can be used wirelessly from inside and outside the vehicle
- left- and right-hand side measurement as standard
- automatic changeover when changing truck and trailer
- simple installation
- quick and easy to program
- no excuse to underload or overload your vehicles ever again
- no more return trips to unload
